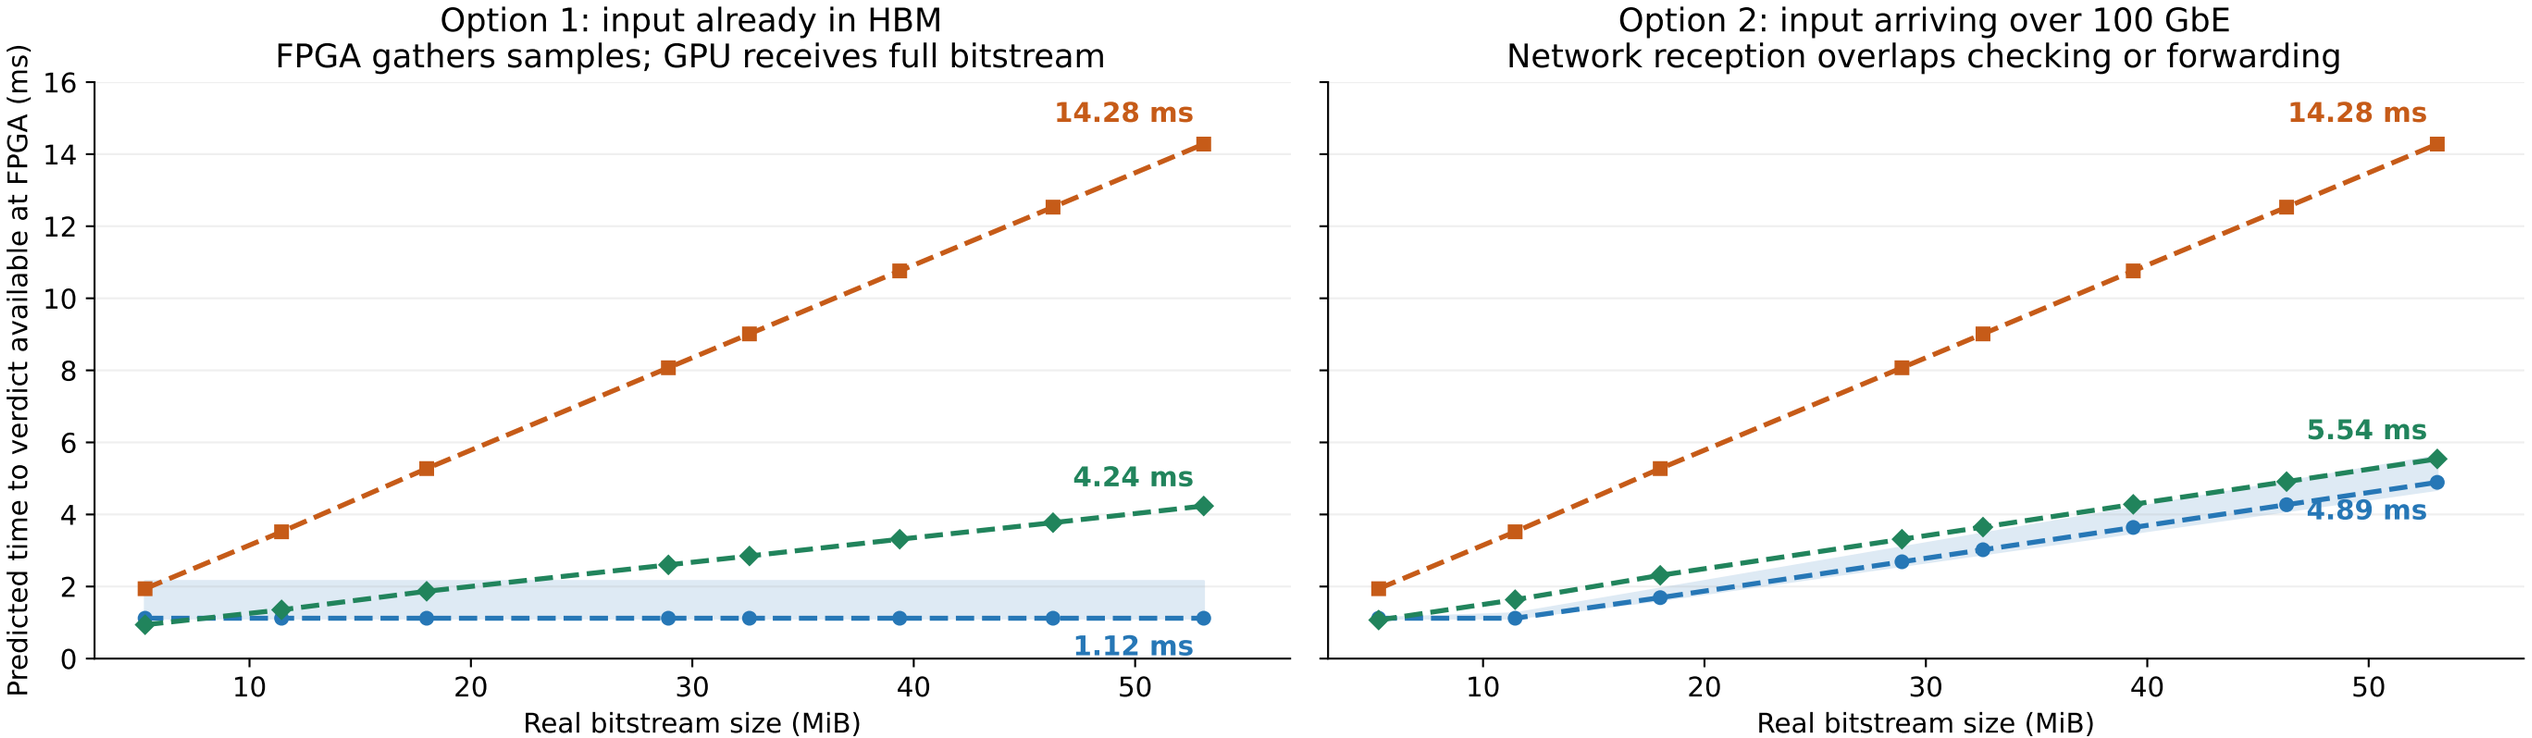
Predicted verdict latency — real bitstream workloads



Central assumptions: HBM gather 4 GB/s; network payload 11.5 GB/s; unchanged OPT_6 CNN; measured R06 GPU tail.
Blue shading: gather 2–8 GB/s (left), network 10–12 GB/s (right). Sensitivity only, not confidence intervals.

Created 7 November 2026 • Calibration: 21 October 2026 • Predictions, not new measurements
